

# The Shadow Knows

*Who knows what evil lurks in the hearts of men? The Shadow knows!*

Without comment I present finding of researchers globally. There are at least three nanobots being delivered via the CoVid-19 injections. There is one nano-dust of unknown function and a GMO Morgellons disease being delivered via the nasal swab tests. The GMO Morgellons are metallic, may be magnetic, and are able to form networks by connecting.

A significant finding is that most or all of the nanobots/dust appear to be made from technetium-99m with a pyrophosphate ion. TC-99m adheres to calcium and also appears to have some cell wall permeability. TC-99m is a radioactive metal commonly used in medical research and procedures. Since TC does not belong in the body, this can be used as the achilleas heal to destroy all bots made from TC.

Use the following Hieronymus style **Radionics** rates to destroy the bots. Remember these rates can be used with Base-10 and all other Radionics systems by printing them out and putting them in the input well.

Suggested use: Broadcast and potentize water.

To Destroy all Technetium no matter the form used, the following rates will work:

**TECHNETIUM**

58-40.9 & 36-7.5 & 5-38.25, 38M

9-7 & 38-12, 35M

39.6-84.6 & 17-46.6, 33M

80-85.1 & 5-3, 43M

16.5-58.4 & 15.5-59.25, 38M

Rates joined by an ampersand “&” are multibank rates. That means they all get the same amount of time when broadcasting or potentizing.
