

# The Shadow Knows

Who knows what evil lurks in the hearts of men? The Shadow knows!

***Eighth Edition December 2022***

***Christmas Edition***

## **NEW THREATS**

There were rumors of Vaccine components in frozen food. Specifically, ice cream, frozen berries, and frozen chicken. While the ice cream and frozen berries was possible because of its low temperature and being consumed while frozen/cold it was also unlikely since stomach acid would destroy many components of the vaccine. Chicken was never possible because it is cooked and not consumed frozen. Some components of the vaccine require low temperatures.

New threats are now becoming clear. The low temperatures of components of the vaccine may no longer be required and in fact, injection may no longer be required. There has been rumors of aerosol versions of some parts of the vaccine components. There were also rumors about them in drinking water, especially bottled water. While I do not believe the components of the vaccine can exist in chlorine or ozone disinfected tap water, there is normally no disinfectants in bottled water. Still, a possibility is not a good reason to stop drinking the water of your choice.

There are now videos of animals in the wild dying in the same way that many of the injected have died. These animals never received injections and never were near mankind. This is an indicator that components of the vaccine are now being distributed in ways other than injectables. What that method is cannot be easily determined but logic dictates that aerosol distribution via the air is the most likely. Wild animals do not eat human food or drink tap water. They do breathe the same air.

It is also believed that those that have been injected become factories for shedding of components. This may be true and there are some indicators that people who were never vaccinated but are surrounded by people who are vaxxed are becoming ill. The most common complaints are brain fog, lung problems and difficulty breathing and tiredness. The brain fog and lung problems can be resolved by a daily supplement of NAC. (N-Acetyl Cysteine) NAC is over the counter and can be found in many stores that sell vitamins. Lung problems may also be corrected by a visit to a chiropractor depending upon issues. Ask them to check the ribs.

The radionics rates published in prior editions of The Shadow Knows have been receiving reports of effectiveness for protecting those that have been vaxed. It seems that it is also an effective protection for those that have never been vaxed when combined with the NAC (capsule or broadcast). Suggested broadcast is 24-hours per day for both vaxxed and unvaxxed. Reinfection with vax components via air seems possible but no side effects have been observed from those under broadcast protection.

While radionics remains the best option, protection has been reported by those using body electrification such as the Clark Zapper or Beck devices. Strong PEMF devices may also work. Certain components of the vax are destroyed by far infrared saunas. There are additional benefits to all three of these protocols so becoming familiar with them may be worthwhile.

### **The Shadow Speaks**

Due to the nature of these newsletters, they are passed from hand to hand. There is no signup and distribution is limited. Some individuals maintain a repository which they quietly share. As always, there is no attribution to the identity of The Shadow.

It has come to our attention that someone is publishing modified newsletters as The Shadow. So far, these newsletters contain the same material but there is the possibility that they may contain misinformation in the future. It is assumed the purpose is to create distrust or to flush the identity of The Shadow. Make sure

that you get a copy of this letter from someone you trust and not anonymous sources such as Facebook where the fake newsletters have appeared.

There are rumors that the Covid-19 vax is going to a mandatory vaccine for farm animals. If that happens and you cook your food, then your exposure may be mostly to the spike protein which will be about the same as the shedding from being near people who had the vax.
